

Math Challenge Worksheet--April 2

During our last unit, we practiced partial sums addition. Here's an example.

$$\begin{array}{r} 456 = 400 + 50 + 6 \\ + \quad \underline{126} = 100 + 20 + 6 \\ 400 + 100 = 500 \\ 50 + 20 = 70 \\ 6 + 6 = \underline{12} \\ 582 \end{array}$$

Try to use partial sums addition to complete the following problems.

1. $\begin{array}{r} 26 \\ + \underline{34} \end{array}$

2. $\begin{array}{r} 149 \\ + \underline{138} \end{array}$

3. $\begin{array}{r} 576 \\ + \underline{257} \end{array}$

4. Invisible Bob drove 148 miles in the morning. Then he drove 97 miles in the afternoon.
How far did Invisible Bob drive?
